TEMPERATURE

- Outperforms conventional and synthetic greases.
- Specially formulated with a high concentration of the unique proprietary ProKote AF (Anti-Friction) anti-wear and extreme-pressure EP agents.
- Lithium base penetrating formula.
- Bonds to metal surfaces.
- Protects component metal-to-metal contact even under heavy EP and high-impact shock loads.
- Designed to reduce friction, wear and noise levels under severe and heavy-duty conditions.
- High and low temperature protection and stability.
- Non-melting water-resistant formula.
- High resistance to water washout.
- Provides corrosion protection properties.
- Extends maintenance and repair intervals.
- Contributes to increase equipment life, overall machine productivity, power and performance.
- Saves energy costs.

DIRECTIONS: Apply anywhere where grease is required as lubricant. May be applied manually or with a cartridge-loading grease gun.

USES: Multi-purpose for industrial gears, electric motor and wheel bearings, water-pump and high-impact and load type bushings, chassis lube and fifth-wheel, ball, U, and CV joints, and countless other industrial, automotive, farming, construction, mining, offshore drilling, marine, heavy machinery and equipment rotating and flat type applications, etc.

Timken Extreme-Pressure OK Load (ASTM D-2782) = +100

CAUTION: Contains synthetic hydrocarbon derivatives. If swallowed, call a physician immediately. Do not induce vomiting. Keep out of reach of children.
